## PROFILE

### Hi! I'm Erik

A Front-end developer with strong communication skills and a passion for building web applications. Do you want to know what really gives me energy? Building cool features together with my team. Deliver high quality within the time boundaries, while keeping that sharp eye for details.

### Front-end Professional

I have 10 years experience in building front-end applications with Angular and Typescript. My main goal is to deliver high-quality code that meets the project requirements and provides an excellent user experience. I really like discussing and applying front-end architecture and its patterns.

### Team Player

A dedicated and motivated team player with a strong work ethic and excellent interpersonal skills. That's me. Always happy to contribute with a collaborative mindset, effective communication and problem-solving capabilities to foster a positive and productive team environment.

### Auto Didactic

My skills and experience in building web applications are gathered through an autodidactic approach. By diving into the APIs of frameworks and languages, I developed that drive to never give up and only stop learning until I fully understand and master the technology.

### Sharp Eye on the details

I stand for maintainable code that is easy to understand. I have a really strong focus on the details and I'm always striving the highest possible quality. In a development team I'll probably be the guy that introduces code conventions and reaches out to team mates to get and keep the code base logically structured.

**Coach**
I have now also discovered how much energy it gives to be able to transfer the knowledge I have acquired myself to other developers. And to guide them, or even a whole team, in developing logically structured and well-functioning front-end applications.

## REFERENCES

**Team dev at Soda**
*"Erik is definitely a hardworking individual (if not the most hard working of our FE bunch). That feeling comes from the fact that he seems to always be involved in many things at once, being it initiatives or just plain tickets. What I also see, is that he is not scared to get hands dirty or to take on very complex topics, good example is tackling OpenAPI or pushing on Storybook transformation.*

*I also value his reviews of my own PR's, which are always very meticulous and usually on point. Never ever have I got a comment from him which didn't make logical sense, so I usually go for it. Also resolving the discussion is usually very fast and within PR itself, so that is a plus."*

**Team dev at Soda**
*"I strongly believe you have really good Angular knowledge and JS in general. I really value your attention to the details, those small things when sum up makes the differences. Example of that can be all the linting rules + structural changes in our project, vscode snippets even picking up ng-deep was a delighter.*

*And what is more impressive I have the feeling you are doing it in between a regular feature development (like your time is stretching or something).*

*Also I like your calm down attitude and this striving for a solution with the stubbornness of a maniac (I think you can't be Angular pro without such mindset). Which can be seen in multiple technical discussion topics you are starting on our tech-frontend slack channel."*

## EXPERIENCE

### Soda - Front-end Developer, remote, nov 2021 - jun 2023

Front-end development for the Soda Cloud web application. Soda provides a Data Quality Testing platform. The cloud product offers Soda customers an online environment where they can actively monitor and collaborate on the management of their data quality.

*Stack: Angular 15, Typescript, RxJs, Storybook, Chromatic*

### Achmea - Lead Front-end Developer, Apeldoorn, dec 2014 - nov 2021

Front-end development for a large portion of the Centraal Beheer Achmea sales funnels. Technical Lead for one of the generic Achmea IT teams, in which role I was able to build the Centraal Beheer front-end platform from the ground up. A platform on which several development teams have now built approximately 100 Angular applications.

*Stack: Angular 12, Typescript, RxJs, Storybook, NgRx, Nx, Sitecore*

## PRE-IT EXPERIENCE

Before I was able to take the opportunity to become a front-end developer, I was active in spatial planning. I'm a graduated spatial planner and have been working for INBO, a large architectural company.

My activities consisted of directing spatial projects, advising on (re)development and transformation of real estate and industrial estates, drawing up spatial-economic master plans, land and real estate exploitations, and feasibility analyses.

## EDUCATION

I have (l)earned my IT skills through an autodidactic approach. Besides this, I have been an active user of Pluralsight, and I have followed many online courses with a focus on Javascript, Typescript, and Angular. I'm currently investing time to master React.

**Sitecore, Certified Sitecore .Net Developer**
License, 2015

**Open University Nijmegen, Bachelor Informatica**
Module databases, 2014

**Scobe Den Bosch, Plan Economics**
Master, 2011 - 2012

**Radboud University, Spatial Planning**
Master, 2003 - 2006

**HTS Arnhem, Civil Engineering**
Bachelor, 1999 - 2003
